

IT Mobile Application Developer

Job Description

If you are a well-rounded and innovative IT Mobile Application Developer looking for fun and challenging IT work beyond dull maintenance projects, join our cutting-edge team at **S&H**! We are seeking a self-motivated and cooperative IT Mobile Application Developer to develop and support large-scale systems and web applications for our clients in our new mobile department. As an IT Mobile Application Developer with S&H, you will work on exciting and diverse mobile platform and application projects with a dynamic team made up of business and system analysts, project managers and other developers.

To continue our expansion, we are looking for a talented **IT Mobile Application Developer**

Job Responsibilities

As an IT Mobile Application Developer with S&H, you will work in a collaborative environment in which knowledge is shared within and between teams. You will provide technical mentoring and leadership as you proceed through the mobile application development lifecycle.

Additional responsibilities of the IT Mobile Application Developer include:

- Building out customer-facing self-service mobile applications
- Developing internal business-facing mobile platforms that facilitate business interactions
- Facilitating access to customer data through mobile platforms
- Developing mobile applications based on your strong Java and .NET skill base
- Working on other projects as assigned

Desired Skills & Experience

As an IT Mobile Application Developer with S&H, you must possess superb communication and presentation skills as well as strong technical documentation skills. Our ideal IT Mobile Application Developer is a thought leader who is open to new ideas, has a desire to learn new concepts and is willing to collaborate with others on projects. You must also be able to present technical ideas and high-level concepts and solutions to internal and external teams who may not have IT backgrounds.

Additional requirements for the IT Mobile Application Developer include:

- High school degree required; Bachelor's of Science in Computer Science, Mathematics or similar field preferred
- Minimum 1-3 years' experience with non-mobile systems such as .NET and Java, including C#.NET and /or VB.NET, ASP.NET, ADO.NET, LINQ, J2SE, JEE, JMS, JSSE
- Strong object oriented design experience, including working knowledge of core libraries and design patterns.
- Strong knowledge of front end development with HTML5, CSS3, JavaScript and /or Silverlight and Objective C
- Strong knowledge of relational databases and embedded database engines, including MSSQL Server, Oracle, MySQL, Postgre SQL, SQLite Server

- Experience in systems integration through XML Technologies (XML, JSON, XSD, XSLT, XQuery, Web Services, REST, RDF, Ontologies)
- Experience in mobile interface design and fast prototyping with Visio and /or Expression Blend
- Experience in creating cross-platform mobile applications for iOS, Android and Windows Phone, using Xcode and Xamarin MonoTouch
- Experience with unit-testing frameworks
- Working knowledge of iOS and/or Android operating systems
- Working knowledge of a software development methodology, such as Agile and /or Scrum
- Working knowledge of UML
- Adaptable technical abilities
- Ability to pass a background check and pre-employment drug screen
- Ability to travel to client locations as needed
- Experience completing an application and seeing it through the certification or app market process preferred
- Candidates must have the ability to work at S&H's client locations.
- All positions include the possibility of travel.
- Candidates must be eligible to work in the Switzerland for any employer.
- S&H is an equal opportunity employer.
- S&H is a Drug-Free work place.

Education and Languages

- University degree or equivalent
- IT Academic background
- Fluency in English and French is a plus

Activity Rate

- Fulltime and Permanent
